DAT:

/SIDS2/gcgdata/geneseg/genesegp-emb1/AA1995.DAT: /SIDS2/gcgdata/geneseg/genesegp-emb1/AA1996.DAT:

Surface of endothelial cells that line the interior wall of capillaries ourface of endothelial cells that line the interior wall of capillaries. OverAM-1 recognises and binds to the integrin alpha-debeta-1 (14AB1) or VCAM-1 according to the antigon-4), a beterodimentic protein present on the surface of certain white blood cells to adhere to the capillary wall in areas where the tissue surrounding the capillary has been infected or damaged. Sometimes this white blood cells no adhere to an become uncontrolled, with white blood cells flooding to the scene, causing widespread tissue damage. Cops. capable of bloocking this process may be beneficial as therapeutic agents. In AHB1 also recognises the extracellular matrix glycoprotein fibronectin. Three distinct IA4B1-binding sites have been identified with ibbronectin. One site is found in the HeplI region and is expressed in all isoforms; two others (CS1 and CSS) are present in the alternatively spliced type III connecting segments. CS1 has the higher affinity for IA4B1 and contains the tripopiede LDV as its minimal active site. Peptides AAR95704-805 are modeled after a portion of the CSI peptide that include the LDV domain presented in such a way by its movel flanking sequence to produce a potent inhibitor of IA4B1 binding.

                                                                                                                                                                                                                                                                                                                                                                                              AAW25187-W25192 are peptides containing an LDV sequence or equivalent. The peptides are capable of binding to cell adhesion molecules and are used in aqueous irrigation solutions for use during and after endoscopic operations. Preferred irrigation solutions are electrolyte-free and contain 1 microg/ml to 100 mg/ml of one or more oligopeptides containing the amino acid sequences: RGD, LDV, DGBA, GPRP, VTL, YIGSR, KGAGDV and/or REDV (given in one letter amino acid during and after tumour removal by transurethral resection. The

The present sequence is a linear stretch of amino acids (present in fibronectin) recognised by the integrin alpha4betal. Integrins are cell bronectin) recognised by the integrin alpha4betal. Integrins are cell brones. The integrins of the cast proteins of adenoviruses binds to integrins. The integrins not only proteins of adenoviruses binds to integrins. The integrins not only proteins of adenoviruses binds to the extracellular matrix molecules. The mediate cellular adhesion to the extracellular matrix molecules. The acell in vitro having a particular cell surface binding site. The acell in vitro having a particular cell surface binding site. The adenovirus and a second component that selectively binds a binding domain of the penton base protein of the adenovirus and a second component that selectively binds the cell surface binding site. A complex of the adenovirus and the cell surface binding site. A complex of the adenovirus and the cell is contacted with it to allow entry of the adenovirus into the cell. The methods can be used for research and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Integrin-ligand; dissociator; disaggregation; platelet thrombus; stroke; fibrinogen; glycoprotein IIb-IIIa; angina; myocardial infarction; bone; osteoclast; osteoporosis; angiogenesis; cancer; diabetic retinopathy; psoriasis; tumour; atherosclerosis; inflammatory bowel disease; asthma; organ transplant rejection; arthritis; ILD.

                                                                                                                                                                                                                                           in existing platelet thrombus in a blood vessel is due to dissociation of fibrinogen from glycoprotein IIb-IIIa. This dissociation is caused by the binding of an integrin-ligand dissociation transfer an existing platelet thrombus in a blood vessel, where the platelet comprises an existing platelet thrombus in a blood vessel, where the platelet comprises administering a compound which dissociates fibrinogen bound to a first attention platelet glycoprotein IIb-IIIa, by binding to a second interacting attention platelet glycoprotein IIb-IIIa, by binding to a second interacting attention in method is used to treat humans with unstable angina, stroke and/or acute myocardial infarction. The methods can be used to enact de-adhesion of osteoclasts from the bone surface to halt bone loss in a patient with osteoporcesis. The methods can also be used for the de-adhesion of angiogenic endothelial cells in a patient with osteoporcesis. The methods can also be used for the de-adhesion of angiogenic endothelial cells in a patient with osteoporcesis. The methods can also be used for the dissolution of pre-tormed platelet tumours, atherosclerosis, inflammatory conditions, e.g. arthritis, inflammatory bowel disease, or organ transplant rejection, and aethma. The methods can be used for the dissolution of pre-formed platelet aggregates, which is a departure from the current strategy of treatment prior to formation of vascular occlusions.
                                                                                                                                                                                                                                   The invention relates to integrin ligand dissociators. Disaggregation of

The invention relates to a novel system for reconstitution of osseous tissue comprising a scaffold carrying a compound (1) that promotes bone tormation and accomponent that decreases bone resorption (II).

(I) induces migration and adhesion of osteoblasts and osteoclasts and costeoclasts and osteoclasts and costeoclasts and selected from: selectin or selectin binding matrix. (1) is preferably selected from: selectin or selectin binding plasminosen activator inhibitors, procease inhibitors and matrix procease inhibitors and metalloprocease inhibitors. The peptides AAY80466-Y80492 are claimed examples of cell adhesion peptides used in the system of the invention. Tractures, fissures or bene mass loss: Incorporation of (1) into the scaffold results in rapid seeding by osteoblasts and the development of an organic matrix, i.e. the preformed scaffold replaces the rate-determining step of extracellular matrix formation. The scaffold can be designed to have a predetermined resorbion/degradation rate, and may include regulatory compounds for specific cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                            (e.g., multiple sclerosis), allergies atherosclerosis, colitis, diabetes, inflammatory bowel disease, kidney inflammation and diabetes, inflammatory bowel disease, kidney inflammation and restenosis. Prior art inhibition of VLA-ACS-1 interaction either involves the use of anti-VLA-4 antibodies, which can themselves induce an immune response on repeated administration, or the 25-mer CS-1 peptide, which is large and costly to make and is subject to rapid proteolytic degradation. The peptidominatios of the invention are smaller in comparison to the CS-1 peptide and therefore less expensive to manufacture, and are resistent to proteolytis. Sequences AA777411-Y77414 and AA777434-Y77444 represent fragments of the CS-1 peptide for their ability to inhibit VLA-4 Jurkat cells to immobilised CS-1 peptide
                                                                           The invention relates to peptidomimetic compounds (AAY77415-Y77438) capable of inhibiting the binding of the VLA-4 integrin (alpha-4-beta-1, CD494/CD29) to the CS-1 portion (2S amino acids) of a splice variant of the extracellular matrix protein fibromectin (FN). VLA-4 is expressed on the surface of leukocytes; the CS-1 FN/VLA-4 interaction plays an important role in the maturation and trafficking. VLA-4-mediated leukocyte adhesion to the CS-1 FN of endochelial cells is also a critical step in the inflammatory response. The peptidomimetics of the invention may be used to treat both chronic and acute immunoinflammatory conditions, such as asthma, rheumatoid arthritis, osteoarthritis and allograft rejection. They may also be used to treat psoriasis and other skin inflammations, demyelinating diseases of the central nervous system
New peptidomimetic compounds used as cell surface fibronectin expressing receptor and VLA-4 inhibitors for treating inflammatory and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LDV peptide; VLA-4 inhibitor; very late antigen; alpha-4-beta-1; CD49d/CD29; cell adhesion; arylalkyl azolylalkanoic acid derivative; arylureidoalkyl azolylalkanoic acid derivative; inflammatory disorder; autoimmune disorder; respiratory disorder; LDV motif.

The invention relates to novel arylalkyl and arylureidoalkyl azolylalkanoic acid derivatives and related compounds (1), and their salls and prodrugs. These are are integrin inhibitors, specifically of salts and prodrugs. These are are integrin inhibitors, specifically of VLA-4 (very late annigen 4, also known as alpha 4-beta-1 or CD4943(D29), which mediate cell adhesion. VLA-4 is a receptor for the cytokine-inducible cell surface protein VCAM-1 (vascular cell adhesion molecule-1) and for the alternatively spliced forms of fibronectin (FN) which contain the CS-1 domain. The novel compounds inhibit cell adhesion, and consequent or associated pathogenic processes mediated by VLA-4, and man their caspiratory disorders. These include asthma, arthritis, sutchimmatory bowel disease. Sequences AAY86918-Y695co represent peptides derived from the VLA-4-binding domain of the FN CS-1 region which contain the LDV motif and are known to inhibit fibronectin-dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to the

The invention relates to a method for treating a mammal with, or at risk of developing, chronic renal failure, involving the administration of at least one integrin antegonist. The integrin antagonists that may be used in the method include antagonists of alpha-4-subunit containing integrins or antagonists of alpha-1-subunit containing integrins or antagonists of alpha-1-subunit containing integrins. In particular, the antagonists of alpha-1-subunit containing integrins. In particular, the antagonists of alpha-1-subunit integrin and its cognate ligand (collagen IV, and laminin in the case of VLA-1, and fibronectin and VCAV-1 in the case of VLA-4). The method of the invention may be used to treat chronic renal failure, and etage renal disease, chronic diabetic nephropathy, diabetic nephrosts, objections of the case of VLA-1, and fibronectin and VCAV-1 in the case of VLA-4). The method of the invention may be used to treat chronic renal failure, and etage renal dispetic renal hypertrophy, hypertensive nephrosts, chronic diabetic nephrogathy, diabetic renal hypertrophy, hypertensive glomerulosclerosis, chronic glomerulonephritis, hereditary nephritis or renal dysplasia. Sequences AAB73466.AAB73466 represent fibronectin, which inhibit fibronectin-dependent cell adhesion, and may therefore be used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is given in a specification relating to a polypeptide comprising a series of heptad-repeats that mimic a transmembrane domain, and a selected cytoplasmic domain attached to the heptad repeats. At least a portion of the polypeptide is prepared recombinantly or at least 1 heptad repeat in the series has a different amino acid sequence to other heptad repeats in the series has a different solypeptide is useful in the construction of structural models which are useful for evaluating structure and activity of a selected occupied and clustered transmembrane protein having the selected cytoplasmic domain and for identifying agents as inhibitors of alpha4 integrin biological
bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. It] are useful for modifying therapeutic peptidas e.g. hormonase, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half iffe) and specificity as bonding to large molecules decreases and intracellular uptake and interference with physiological processes AABB0829 to AABB2441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polypeptides useful in construction of structural models for identifying therapeutic compounds, comprises series of heptad repeats that mimic a transmembrane domain and cytoplasmic domain attached to

responses by contacting the structural model with paxillin or a paxillin related molecule in the presence and absence of a test agent and determining binding of paxillin or paxillin related molecule to the structural model. A decrease in binding in the presence of the test agent indicates that the test agent is an inhibitor of alpha4 integrin biological response. Inhibitors of the binding of paxillin to alpha4 are useful in blocking immune responses in conditions such as inflammatory bowel disease, arthritis, multiple sclerosis and asthma and in inhibiting atherosclerosis and scarring during wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polypeptides useful in construction of structural models for identifying therapeutic compounds, comprises series of heptad repeats that mimic a transmembrane domain and cytoplasmic domain attached to

The invention is useful for evaluating structure and activity of a selected occupied and clustered transmembrane protein with the selected cytoplasmic domain and for identifying therapeutic compounds. It is also useful for identifying a cytoplasmic domain binding partner. It is may be used to study protein interactions with transmembrane proteins such as integrin, which can be used to treat conditions in which over activity of integrins is involved, such as inflammation,

GENERAL INFORMATION:
STRUCTURAL MODELS FOR CYTOPLASMIC
TITLE OF INVENTION: STRUCTURAL MODELS FOR CYTOPLASMIC
TITLE OF INVENTION: DUMAINS OF TRANSMEMBRANE RECEPTORS
NUMBERS OF SEQUENCES:
COMMUTER REDABLE PORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBP PC Compacible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOCTWARE: PAPELICATION DATA:
APPLICATION NUMBER: PCT/US95/07542
FILING DATE: 13-JUN-1995
FILING DATE: 15-JUN-1995
FILING DATE: 15-JUN-1995
FILING DATE: 15-JUN-1994
FILING DATE: 100.000, Force 23; DB 5; Length 5; DB 5; Length 5; DB 1 BILDV 5

Pypothetical protein SPI563 [imported] - Streptococcus pneumoniae (strain TIGR4)
C;Species: Streptococcus pneumoniae
C;Date: 03-Aug-2001 #sequence_revision 03-Aug-2001 #text_change 01-Feb-2002
C;Accession: A95182
R;Tetelin, H.; Nelson, K.E.; Paulsen, I.T.; Eisen, J.A.; Read, T.D.; Peterson, S.; Heid on, J.D.; Umayam, L.A.; White, O.; Salzberg, S.L.; Lewis, M.R.; Radune, D.; Holtzapple, on, J.D.; Umayam, L.A.; White, O.; Salzberg, S.L.; Lewis, M.R.; Radune, D.; Holtzapple, Science 293, 498-506, 2001
A;Authors: Loftus, B.J.; Yang, F.; Smith, H.O.; Venter, J.C.; Dougherty, B.A.; Morrison, A;Title: Complete Genome Sequence of a virulent isolate of Streptococcus pneumoniae.
A;Accession: A95182
A;Csession: A95182
A;Accession: A95182
A;Molecule type: DNA
C;Date: 03-Dec-1999 #sequence_revision 03-Dec-1999 #text_change 21-Jan-2000 C;Accession: T41157 R;Hilbert, H.; Duesterhoeft, A.; Wood, V.; Rajandream, M.A.; Barrell, B.G. Bubmitted to the EMBL Data Library, October 1998 A;Reference number: 221973 A;Accession: T41157 A;Accession: T41157 A;Status: preliminary; translated from GB/EMBL/DDBJ A;Status: preliminary; translated from GB/EMBL/DDBJ A;Residues: DNA A;Residues: 1-312 <HIL>A;Cross-references: EMBL:AL031907; PIDN:CAA21428:1; GSPDB:GN00068; SPDB:SPCC18.14c A;Experimental source: strain 972h-; cosmid c18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

aspartate-semialdehyde dehydrogenase (EC 1.2.1.11) - Shewanella sp. DSS12
N;Alternate names: aspartate beta-D-semialdehyde dehydrogenase
C;Species: Shewanella sp. DSS12
C;Date: 17-Jun-1997 #sequence_revision 18-Jul-1997 #text_change 20-Jun-2000
C;Accession: JC5436
E;Kato, C.; Smorawinska, M.; Li, L.; Horikoshi, K.
J. Biochem. 121, 717-723, 1997
A;Title: Comparison of the gene expression of aspartate beta-D-semialdehyde dehydrogenasr
A;Reference number: JC5435; MUID:97306055; PMID:9163523
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Accession: JC5435
